65913	7550	04/19/2010		
NXP, B.V. NXP INTELLECTUAL PROPERTY & LICENSING M/S41-SJ 1109 MCKAY DRIVE SAN JOSE, CA 95131			EXAMINER MEROUAN, ABDERRAHIM	
			ART UNIT 2628	PAPER NUMBER
			NOTIFICATION DATE 04/19/2010	DELIVERY MODE ELECTRONIC

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

ip.department.us@nxp.com

### Office Action Summary

**Application No.**

10/581,222

**Applicant(s)**

BARENBRUG ET AL.

**Examiner**

ABDERRAHIM MEROUAN

**Art Unit**

2628

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 30 September 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-13 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-13 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 06/01/2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/GS/US)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-13 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Regarding claims 1, 9, and 10-13, because they don't define a range or specific value for N. N is indefinites as it currently stands.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1- 4, and 9 - 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Deering (U.S. PG-PUB 2002/0109701 A1) hereinafter referred as Deering.

6. As per claim 1 Deering discloses: Computer graphics processor (Deering, Abstract, lines 1-5) having a renderer for rendering in parallel N views of 3D images, (Deering, Page 2.

Paragraph [0019], lines 1-5 *"the frames intended for the right eye and left eye represent the frames intended for N views. "*) said renderer comprising:

a rasterizer configured to transverse for transversing a surface grid over a surface of a primitive of a 3D image primitives (Deering, Page 8, Paragraph[0110], lines 11-17 *"...filtering engine 106 may scan through virtual screen space in raster... (the filtering engine in this case is the rasterizer that scans(traverses) screen space (grid) ) "*) for all N different views of said 3D

image such that transversing is performed once for said 3D image (Deering, Page 4. Paragraph [0050], lines 1-7 *"...3D graphics data... (represent the N views of 3D object) "*),

a shader unit configured to determine\_for determining a color of the output (Deering, Pages 4-5, Paragraph [0056], lines 1-13 *"rendering engine... compute color information..." In this case the rendering engine is the shader unit. "*), of the rasterizer and forward a shaded color sample along with its screen coordinates (Deering, Page 3. Paragraph [0027], lines 1-8 *"the positions are in a two-dimensional field which are the screen coordinates."*),

N screen space resamplers, each of said screen space resamplers being configured to resample the shaded color sample determined by said shader unit (Deering, Page 4, Paragraph [0037],

lines 1-3 "*the supersamples are generated by resamplers(filtering engine).*" and, Page 3, Paragraph [0027], lines 1-8).

N different views such that resampling is performed N times in parallel for said 3D image. (Deering, Page 2, Paragraph [0020], lines 1-12 "*The blur value determines how much blurring the sample is to experience in the filtration from samples to pixels applied by the filtering engine(how many times the resampling will happened).*")

7. As per claim 9, arguments used to reject claim 1 are the same arguments used to reject claim 1.

8. As per claim 2, Deering discloses: Computer graphics processor according to claim 1: a texture memory for storing texture maps, wherein said surface grid is derived from a texture map being associated with said primitive and being stored in said texture memory (Deering, Page 2, Paragraph [0096], lines 1-13)

9. As per claim 3, Deering discloses: Computer graphics processor according to claim 2 wherein a grid associated to one of the texture maps stored in the texture memory is chosen as surface grid, (Deering, Page 2, Paragraph [0096], lines 1-13)

if three requirements are fulfilled, said three requirements including:

said texture map is addressed independently. (Deering, Page 7, Paragraph [0095], lines 1-7)

said texture map is based on a 2D texture, (Deering, Page 2, Paragraph [0096], lines 1-13

*"texture coordinates represent 2D texture"*)

and the texture coordinates at the vertices do not make up a degenerate primitive. (Deering, Page 7, Paragraph [0100], lines 1-8” *rendering engine 102 may compute color intensity values for the interior sample positions of the candidate render pixel based on the vertex color values and also on the one or more texture values if texture processing step 216C was performed.(if the texture is performed the primitives are not degenerate primitives since the degenerate primitives were eliminated.)”*)

10. As per claim 4, Deering discloses: Computer graphics processor according to claim 3. the texture map with the largest area in texture space is chosen if more than one texture maps stored in said texture memory fulfill said three requirements. (Deering, Page 2, Paragraph [0096], lines 1-13)

11. As per claim 10, arguments used to reject claim 2 are the same arguments used to reject claim 10.

12. As per claim 11, arguments used to reject claim 3 are the same arguments used to reject claim 11.

13. As per claim 12, arguments used to reject claim 4 are the same arguments used to reject claim 12.

*Claim Rejections - 35 USC § 103*

14. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

15. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Deering (U.S. PG-PUB 2002/010971 A1) hereinafter referred as Deering, in view of Hayhurst (U.S. PGPUB 20010012018 A1) hereinafter referred as Hayhurst.

16. As per claim 5, Deering discloses: Computer graphics processor according to claim 1 or 2

Deering doesn't disclose: A mean for addressing a display screen, said renderer having an input for a 3D model and an input for at least one viewpoint for rendering image information for supplying to the addressing means wherein the renderer further comprises an initial part having an input for the 3-D model and for at least one main view point for rendering objects in the form of at least one main view point Z-stack having stack layers with color information and Z-values the renderer further comprising a Z-stack constructor in which, from the at least one main view point Z-stack - generated by the initial stage, Z-stacks for

additional viewpoints are constructed, and a further image information occlusion semantics stage for generating image information from the z-stacks. However, Hayhurst discloses:

A mean for addressing a display screen, (Hayhurst, Figure 1, Block 105)

said renderer having (Hayhurst Page 3, Paragraph [0026], lines 15 to 16) an input for a 3D model (Hayhurst Figure 1, Block 106 and paragraph [0025], line 12) and an input for at least one viewpoint for rendering image information for supplying to the addressing means (Hayhurst, Page 3, paragraph [0026], lines 1-2, and lines 15-24)

wherein the renderer (Hayhurst, Page 3, Paragraph [0026], lines 15-16) further comprises an initial part having an input for the 3-D model and for at least one main view point for rendering objects (Hayhurst Figure 1, Block 106 and paragraph [0025], line 12) in the form of at least one main view point Z-stack having stack layers with color information and Z-values (Hayhurst, Page 1, Paragraph [0009], lines 5-7 and Page 2, Paragraph [0010], lines 8-14)

the renderer further comprising (Hayhurst, Page 3, Paragraph [0026], lines 15-16)

a Z-stack constructor in which, from the at least one main view point Z-stack (Hayhurst Page 2, Paragraph [0011], lines 2-12) generated by the initial stage, Z-stacks for additional viewpoints are constructed, and a further image information occlusion semantics stage for generating image information from the z-stacks (Hayhurst Page 2, Paragraph [0012], lines 2-11)

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention to use the Z-stack constructor as taught by Hayhurst into Deering to add Z-stack constructor for generating image information from Z-stacks.

17. Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deering (U.S. PG-PUB 2002/0109701 A1) hereinafter referred as Deering, in view of Hayhurst (U.S. PGPUB 20010012018 A1) hereinafter referred as Hayhurst, and further in view of Hanna et al. (U.S. Patent 6269175 B1) hereinafter referred as Hanna1.

18. As per claim 6, Deering in view of Hayhurst discloses: Computer graphics processor according to claim 5.

Deering in view of Hayhurst doesn't disclose: an object extractor for extraction of objects from a view point z- stack. However, Hanna discloses: an object extractor for extraction of objects from a view point z- stack. (Hanna1, Column 11, lines 25- 27)

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention that adding an object extractor to the computer graphics processor as taught by Hanna1 into the process of the Deering in view of Hayhurst to provide an efficient view of 3D scenes on 3D display system.

19. As per claim 7, Deering in view of Hayhurst: Computer graphics processor according to claim 6

Deering in view of Hayhurst doesn't disclose: wherein the object extractor is arranged for extracting objects from the at least one main view point z-stack. However, Hanna1 discloses: wherein the object extractor is arranged for extracting objects from the at least one main view point z-stack. (Hanna1, Column 11, lines 25 - 27)

Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention the use of the object extractor as taught by Hanna1 into the process of the Deering in view of Hayhurst to describe the functionality of the object extractor from at least one main view point z-stack.

20. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Deering (U.S. PG-PUB 2002/010971 A1) hereinafter referred as Deering in view of Hayhurst (U.S. PGPUB 20010012018 A1) hereinafter referred as Hayhurst, and further in view of Hanna et al. (U.S. PGPUB 20010036307 A1) hereinafter referred as Hanna2.

21. As per claim 8, Deering in view of Hayhurst teaches: Computer graphics processor according to claim 5.

Deering in view of Hayhurst doesn't disclose: wherein the DOF rendering stage is arranged for DOF processing of the at least one main view point z-stack into a at least one main view point z-stack comprising DOF blurring. However, Hanna discloses: wherein the DOF rendering stage is arranged for DOF processing.(Hanna2, Page 1, Paragraph [0013], lines 3- 5) of the at least one main view point z-stack into a at least one main view point z-stack .(Hanna2, Page 1, Paragraph [0038], lines 3- 5)comprising DOF blurring.(Hanna2, Page 1, Paragraph [0013], lines 5 -6) Therefore, it would have been obvious to a person of ordinary skill in the art at the time of the invention the use of the DOF rendering stage as taught by Hanna2 into the process of the Deering in view of Hayhurst for a high image resolution.

22. Claim 13 is rejected under 35 U.S.C.103(a) as being unpatentable over Deering (U.S. PG-PUB 2002/010971 A1) hereinafter referred as Deering in view of Hayhurst (U.S. PGPUB 20010012018 A1) hereinafter referred as Hayhurst.

23. As per claim 13, Deering discloses: Method of rendering N views of 3D images according to claim 11.

Deering doesn't disclose: further comprising the steps of: Supplying data and addressing means of a 3D display wherein for a main view point objects in the form of at least one main view point Z-stack comprising stack layers are rendered with RGB and Z-values constructing from the at least one main view point Z-stack, z-stacks for additional viewpoints and generating from the Z-stacks for additional viewpoints by means of Z-tracing data to be supplied to the addressing means. However, Hayhurst discloses: Supplying data and addressing means of a 3D display device (Hayhurst Figure 1; Page 3, paragraph [0026], line 1, lines 23-25) wherein for a main view point objects in the form of at least one main view point Z-stack comprising stack layers are rendered with RGB and Z-values (Hayhurst Page 2, Paragraph [0010], lines 8-14) constructing from the at least one main view point Z-stack, z-stacks for additional viewpoints, (Hayhurst Page 2, Paragraph [0011], lines 2-7) and generating from the Z-stacks for additional viewpoints by means of Z-tracing data to be supplied to the addressing means, (Hayhurst Page 2, Paragraph [0012], lines 2-11)

It would have been obvious to one skilled in the art, at the time of the Applicant's invention, to incorporate the teachings of Hayhurst into the process taught by Deering, because through such incorporation would provide an improved high speed access for accessing data

*Response to Arguments*

24. Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground of rejection.

25. Applicant's arguments directed to claims 1-13 have been fully considered but they are not persuasive.

*Conclusion*

26. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ABDERRAHIM MEROUAN whose telephone number is (571)270-5254. The examiner can normally be reached on Monday to Friday 7:30 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Xiao Wu can be reached on (571) 272-7761. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
